Colour Overview

The range of colours in the Bursa Malaysia palette have been designed to provide flexibility across our visual identity while also being simple, easy to use, and optimised for digital applications.

We use colour to establish and reinforce a distinct and consistent Bursa Malaysia look and feel. Colour is an integral part of our visual system and brings out the depth and dimension of our identity.

Colour Ratio

It is important to maintain a sense of hierarchy, balance and harmony when using the Bursa Malaysia colour palette. The correct colour ratio must be maintained to ensure that our visual identity is balanced across applications.

Our colour system is flexible, but exercises restraint. Consideration should be given to the impact on the overall colour balance of imagery, as well as the scale of other elements used within your design.

Primaries

Dark Blue

Vivid Blue

Blue 2

Vivid Red

Dark Red

Red 2

White

The Red and Blue palettes are the predominant colours for our brand and are used most often. These colours are used as text as well as full background colours for the majority of applications. They are also used as the primary colours for logos, icons, graphics, and patterns.

Neutrals

Grey 1: 30%

Grey 1: 50%

Grey 1

Grey 2

Grey 2

Black

The neutrals in our colour palette add extra flexibility for text and backgrounds. These colours help to balance and simplify our applications where heavy use of colour can become overwhelming i.e., a multi-page report or mobile app.

Islamic

Dark Blue

Islamic

Islamic tint

Green is used for Islamic and accompanied by a 30% green tint. Dark Blue is used for consistency. Our neutral palette may also be used.

Retail

Dark Blue

Red 2

Retail

Retail tint

Red and Orange is used for Retail and accompanied by a 30% orange tint. Dark Blue is used for consistency. Our neutral palette may also be used.

Colour Usage Principles: Brand

How and where our colour palette is applied greatly affects the impact, hierarchy, and balance of our communications.

Colour as a background

The primary colours for backgrounds are Dark Blue, White, and Grey 1. These colours should be used in the majority of applications to maintain a consistent look and feel for our brand. Greys can also be used as in scenarios where the primary colours are exhausted.

70:30 Ratio Guide

We are a blue brand with a red accent. The Vivid Red can be utilised as an accent to enhance an application. Use only one accent colour within a single side, face, or page of an application. The only permitted exception to this rule occurs when applying colour to graphs, tables, and charts where contrasting colours are needed to differentiate values and data sets.

In digital applications the same rules apply. Where pages scroll or animations change over time, as best as possible try to avoid having more than one accent colour on screen at a time.
